

Lightbeam Health Announces Integration of Artificial Intelligence and Machine Learning for Population Health Management

IRVING, Texas – Sept. 26, 2017 – Lightbeam Health Solutions, the leader in end-to-end population health management solutions, announced today they are integrating artificial intelligence (AI) technology incorporating machine and deep learning functionality into their population health management platform, a technology powered by DocSynk. This solution will improve identification and targeting of patient groups to reduce costs and improve quality.

One of the initial targets is related to the identification of prediabetics and undiagnosed diabetics to support programs such as the Medicare Diabetes Prevention Program (MDPP). Lightbeam also intends to turn the technology toward predicting visits to the emergency department before they happen.

“We are excited to help our clients realize the benefits of machine learning and AI tools to improve outcomes,” said Pat Cline, CEO of Lightbeam Health Solutions. “The technology is impressive. Vaidyanatha Siva at DocSynk is one of the best in the field of machine learning and together, we’ll apply this technology to real-world problems in support of our clients as they operate in a way that rewards value over volume.”

“We’re honored to partner with Lightbeam, the leader in population health management,” said Vaidyanatha Siva, founder and CEO of DocSynk. “Both organizations share the same mission, of improving the quality of care and therefore quality of life. We believe this partnership offering will disrupt the healthcare industry.”

Population health management with machine learning will help deliver next generation predictive analytics.

Medical groups who are interested in learning more about the benefits of AI and machine learning can visit Lightbeam’s products and services page at www.lightbeamhealth.com.

About Lightbeam Health Solutions

Lightbeam Health Solutions delivers a revolutionary model for managing patient populations and associated risk. Lightbeam’s vision is to bring health data into the light through the use of analytics and to provide the insight and capabilities healthcare clients need to ensure patients receive the right care at the right time. Lightbeam’s platform facilitates end-to-end population health management for ACOs, payers, provider groups, health systems and other healthcare organizations aspiring to provide superior care at a lower cost.
