

Lightbeam's Deviceless RPM® Solution Achieves 93.2% Performance Score in 2023 RPM Report by KLAS Research

KLAS Research recognizes CareSignal, a Lightbeam Product, in the limited data segment of their 2023 Remote Patient Monitoring Report

IRVING, TX – June 20, 2023 – Today, [Lightbeam Health Solutions](#), the leader in population health enablement solutions and services, is pleased to announce CareSignal®, Lightbeam's Deviceless Remote Patient Monitoring® product, has been recognized as a high-scoring vendor in the Remote Patient Monitoring (RPM) 2023 report by KLAS Research.

Lightbeam's CareSignal product achieved an overall performance score of 93.2% in the limited data segment of the report, well above the average of 85% across all vendors. KLAS Research based the CareSignal score on feedback from 10 individual respondents across nine unique organizations. According to the report, "Interviewed customers—a mix of clinics and larger organizations—most commonly use the solution to monitor diabetes, and they tend to be highly satisfied, describing the vendor as extremely responsive and accommodating."

"This is the first time CareSignal has been included in a report by KLAS Research, and we are humbled and energized to have achieved the highest score of any RPM company assessed," says Blake Marggraff, CEO of Lightbeam's CareSignal division. "Deviceless RPM enables risk-bearing organizations to scale clinical staff and reach rising-risk patients or members. By meeting patients where they are, our client-partners build upon the deep, caring relationships they have worked so hard to form, all while elevating clinical and financial performance under increasingly challenging value-based care models and financial constraints. Together, we are privileged to truly enable population health by serving the individuals who have the most to gain."

CareSignal deviceless technology is unique in the RPM market. Instead of requiring patients to learn how to use an all-new device, CareSignal leverages text messages and phone calls to engage patients with over 30+ condition-specific programs, including CHF, COPD, diabetes, and depression. Deviceless RPM drives value-based care success because of its ability to capture real-time, self-reported patient data and employs artificial intelligence to encourage long-term patient engagement and enable timely interventions. Speaking to this success, CareSignal client-partners [generated \\$59 million in savings](#) for the Medicare Shared Savings Program (MSSP) in performance year (PY) 2021. Lightbeam continues to innovate the healthcare industry in all aspects, having recently released the industry's first no-cost health equity strategy in-a-box solution, [Radian™](#).
